TreeView

A *tree view control* is a special list box control that displays a set of objects as an indented outline based on their logical hierarchical relationship.

— Microsoft Windows User Experience p. 178

To render a tree view, use an `ul` element with the `tree-view` class. The children of this list (`li` elements), can contain whatever you'd like.

We can put
✨ **Whatever** ✨
We want in here

Show code

To make this a tree, we can nest further `ul` elements (no class needed on these). This will provide them with a nice dotted border and indentation to illustrate the structure of the tree.

To create expandable sections, wrap child lists inside of `details` elements.
